

FILE SHARING: *Transferbigfiles.com*

~description of Transferbigfiles~

TransferBigFiles provides a way to send and receive large files that are too big for email attachments. You can send up to 20 Gigabytes, whereas most email systems max out at 10 to 25 MB. Paid accounts can send files up to 20 GB in size. This is helpful for sharing larger user files and materials.

To create a new transfer, simply add your files and folders to the files panel. Your files are instantly uploaded to our secure servers and a new transfer page will be created.
