

VOCABULARY MANIPULATION: *HIDING BUTTONS*

MultiChat 15 (Created by Nancy Inman, M.A.T., CCC-SLP)

~instructions for reducing the number of visual buttons on a page~

Hiding buttons allows you to manipulate how many and which buttons are visible on the screen. This function may be useful when first presenting the vocabulary to the AAC User. Presenting all buttons at once may be overwhelming. Hiding some buttons will enable the AAC User to more easily focus on specific vocabulary being presented. A button can be temporarily hidden if an AAC User perseverates on a specific button. Hiding the buttons does not delete the information, so it can be viewed again when appropriate.

Examples:

Most manufacturers give instructions on how to hide and show buttons. Check device Manual or User's Guide.
